REMAN PARTS

REMAN (Remanufactured) parts is a service developed by Ponsse. It is based on recycling and reconditioning used service parts, and you can use it to ensure uninterrupted use of your forest machines, flexibly and affordably. You can return a damaged part to Ponsse and replace it by buying a REMAN part which Ponsse has carefully reconditioned. We will compensate you for the returned part when you purchase a REMAN part. You will quickly obtain a new part, and will also save money and the environment.

PONSSE Performance packages

Ponsse Performance Packages are ready-designed spare parts packages for servicing and updating forest machines. With the Performance Packages, even older machines can be upgraded to correspond with the requirements of modern harvesting – be it a data system, harvester head, forwarder scale or crane.

The Performance Package selection includes various means for improving the productivity of your machine. Some of the packages have been designed so that outdated or ageing technology is replaced with modern solutions; thus securing the operability of your machine in the future (e.g. Opti5 update). Moreover, some packages have been designed to replace wearing parts and to make servicing quicker (e.g. measuring wheel packages and sleeve kits), whereas other packages provide old machines with completely new features (e.g. scale packages). You can also avoid extra downtime by conducting preventive servicing using the Performance Packages.

Read more about our selection of more than one hundred different Performance Packages in the latest Service 2011 catalogue.

Best regards,

Olli Koljonen
